

Data Collection and Preprocessing Phase

Date	06-07-2024
Team ID	740299
Project Title	Customer Shopping Segmentation by using machine learning
Maximum Marks	6 Marks

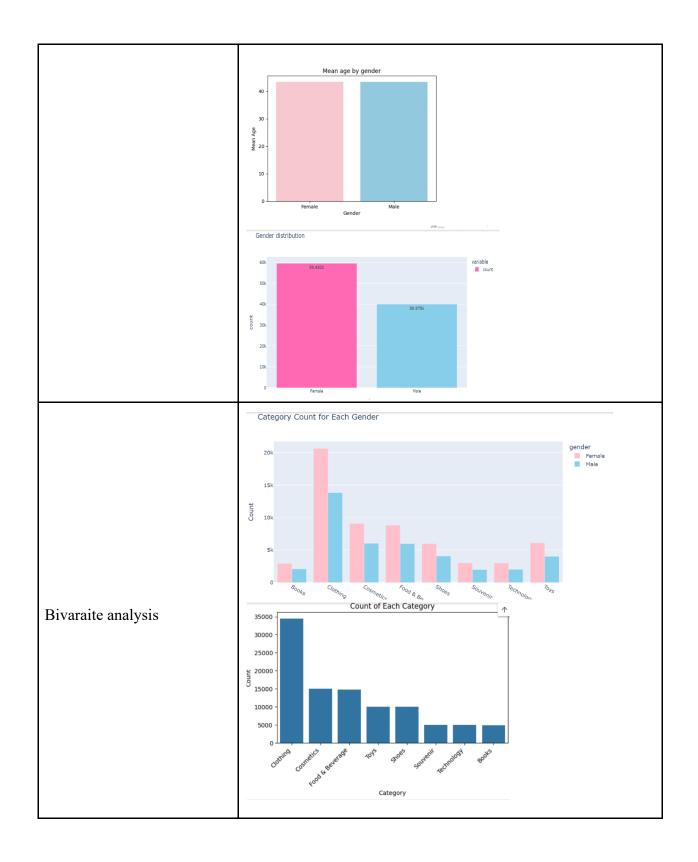

Data Exploration and Preprocessing Report

Dataset variables will be statistically analyzed to identify patterns and outliers, with Python employed for preprocessing tasks like normalization and feature engineering. Data cleaning will address missing values and outliers, ensuring quality for subsequent analysis and modeling, and forming a strong foundation for insights and predictions.

Section	Description						
Data Overview	Dimension: 99457rows × 10 columns Descriptive statistics:
